

School-Home Letter

Dear Family,

During the next few weeks, our math class will be learning how to model division, and use the division algorithm to divide up to three-digit dividends by 1-digit divisors. The class will learn different methods to divide, including using models, repeated subtraction, and the standard division algorithm. We will also learn to divide with remainders.

You can expect to see homework that provides practice modeling division and using the division algorithm.

Here is a sample of how your child will be taught to model division using the Distributive Property.

Vocabulary

Distributive Property The property that states that dividing a sum by a number is the same as dividing each addend by the number and then adding the quotients

multiple A number that is the product of a given number and a counting number

remainder The amount left over when a number cannot be divided evenly

MODEL Use the Distributive Property to Divide

This is how we will divide using the Distributive Property.

Find $72 \div 3$.

STEP 1

Draw a rectangle to model $72 \div 3$.

STEP 2

Think of 72 as $60 + 12$. Break apart the model into two rectangles to show $(60 + 12) \div 3$.

STEP 3

Each rectangle models a division.

$$\begin{aligned} 72 \div 3 &= (60 \div 3) + (12 \div 3) \\ &= 20 + 4 \\ &= 24 \end{aligned}$$

$$\text{So, } 72 \div 3 = 24.$$

Tips

Whenever possible, try to use division facts and multiples of ten when breaking your rectangle into smaller rectangles. In the problem at the left, $60 \div 3$ is easy to find mentally.

Carta para la casa

Querida familia,

Durante las próximas semanas, en la clase de matemáticas aprenderemos a representar la división y a usar el algoritmo de la división para dividir dividendos de hasta tres dígitos entre divisores de un dígito. Para ello, desarrollaremos diferentes métodos para dividir, incluyendo usar modelos, resta repetida y el algoritmo de la división estándar. También aprenderemos a dividir con residuos.

Llevaré a la casa tareas con actividades para representar la división y para usar el algoritmo de la división.

Este es un ejemplo de la manera como aprenderemos a representar la división usando la propiedad distributiva.

Vocabulario

propiedad distributiva La propiedad que establece que dividir una suma entre un número es lo mismo que dividir cada sumando entre el número y luego sumar los cocientes

múltiplo Un número que es el producto de un número determinado y de un número positivo distinto de cero

residuo La cantidad sobrante cuando un número no se puede dividir en partes iguales

MODELO Usar la propiedad distributiva para dividir

Así es como dividiremos usando la propiedad distributiva.

Halla $72 \div 3$.

PASO 1

Dibuja un rectángulo para representar $72 \div 3$.

PASO 2

Piensa en 72 como $60 + 12$.
Divide el modelo en dos rectángulos para mostrar $(60 + 12) \div 3$.

PASO 3

Cada rectángulo representa una división.

$$\begin{aligned}
 72 \div 3 &= (60 \div 3) + (12 \div 3) \\
 &= 20 + 4 \\
 &= 24
 \end{aligned}$$

Por tanto, $72 \div 3 = 24$.

Pistas

En la medida de lo posible, trata de usar operaciones de división y múltiplos de diez cuando dividas el modelo en rectángulos más pequeños. En el problema anterior, $60 \div 3$ es fácil de hallar mentalmente.

Estimate Quotients Using Multiples

COMMON CORE STANDARD CC.4.NBT.6

Use place value understanding and properties of operations to perform multi-digit arithmetic.

Find two numbers the quotient is between. Then estimate the quotient.

1. $175 \div 6$

between 20 and 30about 30**Think:** $6 \times 20 = 120$ and $6 \times 30 = 180$.So, $175 \div 6$ is between 20 and 30. Since 175 is closer to 180 than to 120, the quotient is about 30.

2. $53 \div 3$

between 17 and 18about 18

3. $75 \div 4$

between 18 and 19about 19

4. $215 \div 9$

between 20 and 30about 20

5. $284 \div 5$

10. Allison took 112 photos on vacation. She wants to put them in a photo album that holds 4 photos on each page. How many pages can she fill?

28 pages

11. Hector saved \$726 in 6 months. He saved the same amount each month. How much did Hector save each month?

\$121

Lesson Check (CC.4.NBT.6)

- Annaka used partial quotients to divide $145 \div 5$. Which shows a possible sum of partial quotients?
 - (A) $50 + 50 + 45$
 - (B) $100 + 40 + 5$
 - (C) $10 + 10 + 9$
 - (D) $10 + 4 + 5$
- Mel used partial quotients to find the quotient $378 \div 3$. Which might show the partial quotients that Mel found?
 - (A) 100, 10, 10, 9
 - (B) 100, 10, 10, 6
 - (C) 100, 30, 30, 6

1. There are 3 trays of eggs. Each tray holds 30 eggs. How many people can be served if each person eats 2 eggs?

90

45

Multiply to find the total number of eggs.

Think: What do I need to find? How can I draw a diagram to help?

Divide to find how many people can be served 2 eggs.

45 people can be served. 90

2. There are 8 pencils in a package. How many packages will be needed for 28 children if each child gets 4 pencils?

14 packages of pencils

3. There are 3 boxes of tangerines. Each box has 93 tangerines. The tangerines will be divided equally among 9 classrooms. How many tangerines will each classroom get?

31 tangerines

4. Misty has 84 photos from her vacation and 48 photos from a class outing. She wants to put all the photos in an album with 4 photos on each page. How many pages does she need?

33 pages
